

The client provide requirements
PO and his team (Business team) gather requirement

Business team & the client test / check thier documents manually
Static testing

Designers design the app based on SRS then prepare SDS
Designers, Business team & the client test SDS documents
Static testing

ways to test doc?

- review
- walkthrough
- inspection

Developers write Code to develop the app & test thier code
Dynamic Testing

SOFTWARE TESTING

QA/SDET test the funtionality of the application
Performance testers test the Non-Funtionality of the application
The client test the app if he/she accept the result / agree to release
End users might test the app before release if needed

Dynamic Testing

Dynamic testing is done by 3 testing types:

1. White box testing - testing the app with internal structure by devs
2. Black box tetsing
3. Gray box testing
